

HEAVY DUTY ALKALINE WATER IONIZERS FROM **HIGH TECH HOLDINGS**

Introducing the ION FARM SERIES of water ionizers

QUALITY ASSURED BY ISO 9001 STANDARDS

The Ion Farm Series is a bold departure from any other water ionizer in the world. They have been **DESIGNED** for the wide range of water quality found in the United States, from a typical municipal installation to the hardest of well water. They have been **MANUFACTURED** to rigorous ISO 9001 quality standards. This is evident in the circuit boards and transformers that are encased in plastic, making them completely waterproof and resistant to thermal distortion. Another quality touch is the stainless steel

fasteners used throughout.

Ion Farm Model 2000

Ion Farm Model 5000

DIRECT WATER LINE CONNECTION

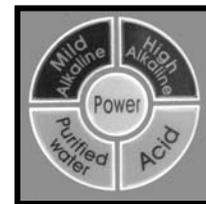

The Ion Farm series connects directly to a cold water line, leaving the faucet free of any attachments. One simply pushes the “power” button to start the flow of alkaline water.

UP TO 1020 pH SETTINGS??

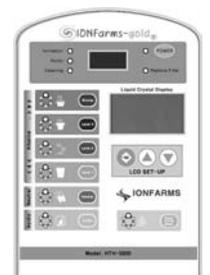

Yes, there are 1020 pH adjustments, or 255 for each of the 4 alkaline levels on the **Model 2000**. Why?? So that the user can achieve the desired alkalinity, regardless of water chemistry. An easy to follow procedure enables the user to program each of the 4 alkaline levels to a suitable “preset,” much like a car radio. This feature assures that the appropriate power will be applied, over a wide range of installations found from region to region, and from typical “city water” to well water. The **Model 5000** makes this adjustment automatically, by detecting water chemistry.

ONE TOUCH OPERATION

The Ion Farm **Model 2000** will operate automatically at the single touch of the “power” button. First in the sequence, is an automatic clean cycle for water cell maintenance, after which, alkaline (or acidic) water is dispensed for immediate use, at a previously selected level. Changing this level is as easy as pushing the “MILD” or “HIGH” buttons until the desired level is reached. The **Model 5000** works much the same way, but with voice verification of mode selection. As with all quality water ionizers, a pH test kit is included for pH verification.

Simple to use Ion Farm 2000 button panel

FILTRATION

The Ion Farm series is **NOT** a water purifier. It is a water alkalizer (ionizer) that efficiently prefilters source water prior to ionization, however, it should not be used on microbiologically unsafe water. Filtration is accomplished through a disposable cartridge consisting of multi-layered silver impregnated carbon/fiber media for the removal of chlorine, heavy metals, VOC's, and sediment to 1 micron. The Ion Farm Series may also be used with Bluestone Group's carbon block and fluoride prefilters.

Easy filter replacement

2-YEAR WARRANTY

The Ion Farm Series is backed by a factory 2-year warranty. **THE ION FARM SERIES IS SERVICED BY A FACTORY TRAINED SERVICE DEPARTMENT.**

SPECIFICATIONS

| | Model 2000 | Model 5000 |
|----------------------------|--|--|
| Weight | 13 pounds | 14.5 pounds |
| Dimensions | 14" h x 10" w x 5" front to back | 14" h x 10" w x 5.5" front to back |
| Alkaline water settings | 4 x 255 | 4 x Auto Range |
| Acid water settings | 4 x 255 | 4 x Auto Range + 1 Super Oxide |
| Power requirement | 110-120 VAC @ 3 amps | 110-120 VAC @ 3 amps |
| Flow rate | 0.75 GPM | 0.75 GPM |
| Hard water compensation | User programmed | Automatic |
| Maximum pH | Source dependant; Usually 9.0 to 10.0 pH max | Source dependant; Usually 9.0 to 10.0 pH max |
| Available ionization power | 28 Volts | 48 Volts |
| Certifications | CE, ISO 9001, Korean Govt, UL (in process) | CE, ISO 9001, Korean Govt, UL (in process) |
